
THE FASER PRESHOWER UPGRADE:
A HIGH SPATIAL RESOLUTION W-SI PRESHOWER DETECTOR ENABLING
SENSITIVITY TO LONG-LIVED PARTICLE DECAYS INTO PHOTONS

2021 - 2025

WRITTEN BY
THÉO MORETTI

UNIVERSITÉ DE GENÈVE, SUISSE
SECTION DE PHYSIQUE - DÉPARTEMENT DE PHYSIQUE NUCLÉAIRE ET
CORPUSCULAIRE
THEO.MORETTI@UNIGE.CH

SUPERVISED BY PROFESSOR GIUSEPPE IACOBUCCI

Contents

1	Introduction	2
1.1	The FASER Detector: Looking Forward for New Physics	4
1.2	Development of Monolithic Silicon Pixel Detectors for HEP.	4
1.2.1	Motivation for a new detector technology	4
1.2.2	Monolithic sensors for ultra-fast timing	5
1.2.3	Monolithic sensors for TeV-scale photon detection	5
2	FASER: Looking forward for Long-Lived-Particles	7
2.1	Physics program: A probe to the Hidden sector and more	9
2.1.1	Production of LLPs	9
2.1.2	Vector Portal: Dark photon	11
2.1.3	Pseudoscalar Portal: Axion Like Particles	12
2.1.4	Neutrinos from collider	14
2.2	The ForwArD Search ExpeRiment	16
2.2.1	Background from the Standard Model to LLP signals	16
2.2.2	Detector requirements	18
2.2.3	Original detector layout	19
2.2.4	Charged and neutral decay signatures from LLPs	22
2.3	Axion Like Particles in FASER	24
2.3.1	Production from rare meson decays	24
2.3.2	Decay into di-photons	27
2.3.3	Sensitivity reach with new PreShower detector	29
3	Monolithic silicon pixel detectors	33
3.1	Fundamentals of semiconductors	34
3.1.1	Intrinsic and doped semiconductors	34
3.1.2	Junction and external voltage	39
3.2	Signal formation and charge carrier transport	43
3.2.1	Drift of electrons and holes	43
3.2.2	Weighting field and Shockley-Ramo theorem	45
3.2.3	Space charge and signal formation	47
3.3	Signal readout and processing	50
3.3.1	Detector readout	50
3.3.2	Amplification stage	51
3.3.3	Equivalent Noise Charge	53
3.3.4	SiGe BiCMOS HBTs	54
3.4	Pixelated detector technologies	56
3.4.1	Hybrid pixel detectors	56
3.4.2	Monolithic pixel detectors	58
3.5	Effects of radiation 4 pages	61

3.5.1	Processes involved 2 pages	61
3.5.2	Consequences of damages and solutions 2 pages	61
4	Monolithic Pixel Detectors for HEP Applications	62
4.1	Prototypes and Design Characteristics	63
4.1.1	ATTRACT Prototype	63
4.1.2	MONOLITH Prototype	64
4.2	Time Resolution of Silicon Pixel Detectors	66
4.2.1	Charge Collection Noise Contribution	67
4.2.2	Time Jitter Contribution	68
4.2.3	Time Walk Contribution	69
4.2.4	Other Contributions	69
4.3	Particle Telescope and Track Reconstruction 2 pages	72
4.4	Test Beam Characterisation of <i>ATTRACT</i> Prototypes	73
4.4.1	frontend Calibrations	73
4.4.2	Testbeam experiment setup and data set	74
4.4.3	Cross talk and robustness to induced noise	76
4.4.4	Detection efficiency	77
4.4.5	Time resolution measurement	79
4.5	Test Beam Characterisation of <i>MONOLITH</i> Prototypes	83
4.5.1	frontend Calibrations	83
4.5.2	Testbeam Setup, Track-Selection Criteria and Data Samples	83
4.5.3	Detection Efficiency	86
4.5.4	Time Resolution	88
4.6	Radiation Tolerance of <i>MONOLITH</i> Prototypes	94
4.6.1	Data samples and experimental set-up	94
4.6.2	Detection efficiency	95
4.6.3	Time resolution	98
5	The new FASER Pre-Shower detector (14 pages)	104
5.1	Production ASIC Description 6 pages	105
5.1.1	Requirements 2 pages	105
5.1.2	Architecture 4 pages	105
5.2	Detector Design 6 pages	105
5.2.1	Modules 4 pages	105
5.2.2	Planes 4 pages	105
5.2.3	Layout of the Pre-Shower 2 pages	105
5.3	Readout and detector control 4 pages	105
5.3.1	Readout 2 pages	105
5.3.2	Logic Board and APP 2 pages	105
5.3.3	PIM and Interlock 2 pages	105
6	Development of the new FASER Pre-shower detector (37 pages)	106
6.1	Pre-Production ASIC characterization 6 pages	106
6.1.1	ASIC description 3 pages	106
6.1.2	Time-Over-Threshold mismatch 3 pages	106
6.2	Production ASIC description 3 pages	106
6.3	Detector qualification and commissioning 19 pages	106
6.3.1	Module assembly 3 pages	106
6.3.2	Characterization set-up 3 pages	106
6.3.3	Front-End working points 2 pages	106

6.3.4	Threshold and Noise scans	4 pages	106
6.3.5	Load scan and Charge calibration	4 pages	106
6.3.6	Plane assembly	3 pages	106
6.4	Trigger and Data Acquisition: TDAQ	9 pages	106
6.4.1	Slow-Control and ASIC configuration	3 pages	106
6.4.2	Readout	2 pages	106
6.4.3	Data conversion	3 pages	106
6.4.4	Data corruption and solutions	3 pages	106
6.5	Testbeam campaign for detector commissioning		106
6.5.1	Layout, powering and readout		106
6.5.2	Meaningful results		106
7	Outlook and conclusion	(4 pages)	107
	Bibliography		113
