
MONOLITHIC SiGe BiCMOS PIXEL DETECTORS: ULTRA FAST TIMESTAMPING PERFORMANCE AND TeV-SCALE PHOTON DETECTION.

2021 - 2025

WRITTEN BY
THÉO MORETTI

UNIVERSITÉ DE GENÈVE, SUISSE
SECTION DE PHYSIQUE - DÉPARTEMENT DE PHYSIQUE NUCLÉAIRE ET
CORPUSCULAIRE
THEO.MORETTI@UNIGE.CH

SUPERVISED BY PROFESSOR GIUSEPPE IACOBUCCI

Contents

1	Introduction (3 pages)	2
2	Silicon pixel detectors (44 pages)	3
2.1	Fundamentals of semiconductors 16 pages	3
2.1.1	Properties of semiconductor 2 pages	3
2.1.2	Intrinsic and doped semiconductors 5 pages	3
2.1.3	Junctions 4 pages	3
2.1.4	External voltage 3 pages	3
2.1.5	Current and capacitance behavior 2 pages	3
2.2	Signal formation and charge carrier transport 10 pages	3
2.2.1	Drift of electrons and holes 3 pages	3
2.2.2	Weighting field and Shockley-Ramo theorem 4 pages	3
2.2.3	Space charge and signal formation 3 pages	3
2.3	Pixelated detector technologies 7 pages	3
2.3.1	Hybrid pixel detectors 3 pages	3
2.3.2	Monolithic pixel detectors 4 pages	3
2.4	Signal amplification 7 pages	3
2.4.1	Charge-sensitive amplifier 4 pages	3
2.4.2	Pulse shaping and amplifier characteristics 3 pages	3
2.5	Electronic noise 4 pages	3
2.5.1	Noise sources 3 pages	3
2.5.2	Equivalent Noise Charge 1 pages	3
3	The MONOLITH ERC project: ultra-fast timing (21 pages)	4
3.1	Timing detectors in HEP 2 pages	4
3.2	The recipe for ultra-fast timing 7 pages	4
3.2.1	SiGe BiCMOS HBTs 3 pages	4
3.2.2	Picosecond Avalanche Detector: PicoAD 4 pages	4
3.3	Time stamping 6 pages	4
3.3.1	Time jitter 2 pages	4
3.3.2	Time walk 2 pages	4
3.3.3	Fixed threshold vs. Constant Fraction Discriminator 2 page	4
3.4	Prototypes and characteristics 6 pages	4
3.4.1	MONOLITH prototypes 3 pages	4
3.4.2	PicoAD prototypes 3 pages	4

4	Performance characterization of MONOLITH and PicoAD prototype (29 pages)	5
4.1	Testbeam campaigns 15 pages	5
4.1.1	Layout of test beam experiment 3 pages	5
4.1.2	The FE-I4 telescope: track reconstruction 3 pages	5
4.1.3	Detection efficiency 5 pages	5
4.1.4	Time resolution 7 pages	5
4.2	Effects of radiation 14 pages	5
4.2.1	Processes involved 3 pages	5
4.2.2	Consequences of damages and solutions 3 pages	5
4.2.3	Radiation tolerance of MONOLITH prototypes 5 pages	5
4.2.4	Gain and time jitter of PicoAD prototypes 3 pages	5
5	FASER: Looking for TeV-scale photons from ALPs decay (25 pages)	6
5.1	The ForwArd Search ExpeRiment 6 pages	6
5.1.1	Original detector layout 4 pages	6
5.1.2	Charged decay products 2 pages	6
5.2	Axion-Like-Particles decays into di-photon 9 pages	6
5.2.1	Motivation of the ALP model 5 pages	6
5.2.2	Production and decay within FASER 4 pages	6
5.3	Design of the Pre-Shower detector 10 pages	6
5.3.1	Layout and detector subcomponents 4 pages	6
5.3.2	ASIC requirements 2 pages	6
5.3.3	Signal readout 3 pages	6
6	Pre-shower detector development and commissioning (37 pages)	7
6.1	Pre-Production ASIC characterization 13 pages	7
6.1.1	ASIC description 3 pages	7
6.1.2	Gain and ENC 2 pages	7
6.1.3	Time-Over-Threshold mismatch 3 pages	7
6.1.4	Analog memories 2 pages	7
6.2	Production ASIC description	7
6.3	Detector commissioning 15 pages	7
6.3.1	Module assembly 3 pages	7
6.3.2	Characterization set-up 3 page	7
6.3.3	Front-End working points 2 page	7
6.3.4	Threshold and Noise scans 4 pages	7
6.3.5	Load scan and Charge calibration 4 pages	7
6.3.6	Plane assembly 3 pages	7
6.4	Trigger and Data Acquisition: TDAQ 9 pages	7
6.4.1	The UniGe GPIO 2 page	7
6.4.2	Slow-Control and ASIC configuration 3 pages	7
6.4.3	Readout and Data conversion 4 pages	7
7	Outlook and conclusion (4 pages)	8
	Bibliography	8
